### SECURINESS CatsClaw

SECURINESS have the pleasure of introduce you to CatsClaw – the solution that is ensuring proper and effective stop of vehicles.

CatsClaw is available in three alternative models - the mobile and portable, the permanent, and last but not least in a military version.

Sheer visibility of CatsClaw has preventive effect and performance, durability, reliability and operational life has shown itself to be valuable for, among other things, the English and German police, the military in North America and several locations around Europe and at NATO headquarters in Naples. There are currently more than 600 permanent installations and more mobile and portable solutions of CatsClaw. A reference list is not disclosed, but appropriate references can be established if necessary.

The Rubber Pads in the mobile edition take fast action in each other across the roadway, and are fully operational within less than two minutes. In its "dormant" mode, the system works as a sort of speed bump and when activated the custom-designed and engineered knives / blades rise up from the surface of the rubber pads and deflate all tires on a uniform and controlled way so that vehicles are brought to a halt without any risk which unfortunately is characterized by the use of traditional solutions. After use the blade is lowered again and the traffic can continue.

CatsClaw is used through checkpoints, police checks, customs controls, military bases, embassies, border crossings, vulnerable buildings, etc, and the possibilities are endless. Now SECURINESS has the possibility to demonstrate the mobile and portable solution so you that with your own eyes are able to see and feel why CatsClaw has its rectification within safe and effective stop of vehicles.
